DETAILED ACTION

Response to Amendment

This office action is in response to amendment filed on 3/2/10. Claim 7 has been amended.

Allowable Subject Matter

1. Claims 7-10, 13-15, 17, 21, and 23 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The invention of the current application pertains to a base station that may organize poll groups. Independent claim 7 recites that a first electronic device receives transmissions from each of multiple second electronic devices wherein the transmissions include a predicted duration of a subsequent transmission from the second electronic. The first electronic device organizes at least some of multiple second devices into a group having similar predicted durations for the subsequent data transmissions and transmits polls to the second electronic devices within the group.

This manner of organizing poll groups is neither taught nor suggested by the prior art.

The first prior art not on record is Alastalo (US 6,721,302). Alastalo discloses an apparatus and associated method for communicating packet data in a SDMA scheme in which packet data sizes are variable (abstract). Alastalo teaches that in UL SDMA, an access point could ask the mobile terminals in advance the lengths of the next data

Art Unit: 2617

packets that these mobile terminals are going to transmit when polled. Alastalo thus broadly teaches the concept of receiving a predicted duration of a subsequent transmission, but is silent on using this data for forming or organizing a group.

A second prior art not on record is Kasapi et al. (US 7,206,293). Kasapi discloses a system and related method for beamforming in a multi-point communication environment (abstract). Kasapi teaches that a clustering engine groups user terminals based at least in part on certain identified spatial signature attribute(s) of the intended target(s) such as angle of arrival and/or target performance attributes (column 7, lines 65-67; column 8, lines 1-8; column 10, lines 52-61). However, Kasapi does not teach that groups are organized according to a predicted duration of a subsequent transmission as required by the independent claims of the present application.

A third prior art not on record is Gormley (US 6,967,937). Gormly discloses a collision-free multiple access reservation scheme for multi-tone modulation links (title). Gormly teaches that once a base station receives uplink request signals from respective remote units that have data messages to send. The base station then organizes a sequence for uplink data messages and allows uplink access to all of the remote units by sequentially stepping through the remote units (column 8, lines 1-46). However, Gormley does not teach that groups are organized according to a predicted duration of a subsequent transmission as required by the independent claims of the present application.

Accordingly independent claim 7 and independent claims 15 and 21 which recite similar subject matter are allowed for these reasons and the reasons set forth in the response filed on 3/2/10.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
